Dear Malcolm –

Of course, you have brought up, many questions of physiology – I don't know if they are comprehensively addressed in any convenient source.

E.G. In a forest setting, how much of the CO_2 entering the tree might be 50–100 years old (or more) from the forest floor? That should fluctuate by season. I haven't even thought of roots vs. stomata.

Thank you for a fun morning,

Joshua
