... Fly. [+ red bread mold]

Dear Robert:

I've now enjoyed reading your book. It is a new slant on a dramatic passage with which I had abundant contact. It was, by your stated design, less focused than I might have preferred on the "interior scientific" issues. But it is "right on" wrt the Lords. P.S. The "fly room" is still extant. I've not succeeded in getting Columbia → I do have to offer 2 corrections in detail about Neurospora, page 239.

① Robbins worked out the nutritional requirements [biotin] for Neurospora. (Keep in mind Tatum's postdoctoral year at Utrecht on fungal nutrition, generally)
Science 94: 262 (1941)

② Not scraped off agar!! Grown in liquid culture, filtered, and the mycelia dried and weighed. See enclosure

Yours
J. Lederberg
