p268 ↓ HAZ

"Issues" in ECT memoir.

(Besides narrative sequence; timeline).

1!) What was the "innovation"

*encl.) Not any revelation about 1:1 gene:enzyme contra N. Horowitz

Yes: a method (in broadest sense) of exptl. analysis.

[] should develop still further how gene substitution is the heir to comparative method in biological analysis.

2) Institutional facilitators
GEB fellowship; abroad
RF research support

+ dampers.
Stanford Biology Dept

3) Garrod - imputed neglect
on whose part?
communities that were/not aware.
(But this isn't a Garrod bio.)

3a) discipline communications
biochemistry/genetics

~1988

HAZ

I don't – or barely – touch on

11) ELT's personal life: it did impact his moves, so at least indirectly his work

12) ELT/GWB relationships.

{GWB underestimated ELT. He was not conceptually imaginative. He did have (in retrospect) remarkably broad training for a biochemist. Probably only a dozen people anywhere could have given his course in comparative biochem in 1941.

GWB certainly did little to enhance ELT's career, e.g. pointedly did not invite him to Caltech.

~~They had no correspondence after~~ There is no Beadle file in ELT's correspondence at R.I.

(check Nobel. ask Hogg)
